

Trapping at Thomsons

Our Goal is to be predator free at the Thomsons wetland to protect the native birds that make the wetland their home.

Thomsons wetland was created by the local community in 2023-2024 and within a year of its creation, the rare Black-billed Gull was using the wetland.

Birds that use our wetland:

Paradise Ducks	Fantails
Black Swans	Sparrows
Pukekos	Teals
Welcome Swallows	Canada Geese
Magpie	Herons
Mallards	Harriers
Plovers	

Predators we are targeting:

Hedgehogs

Ferrets

Rats & Mice

Stoats & Weasels

Other

Possums

We need volunteers to help us lay and check the traps.

If you're interested in joining the Thomsons trapping group, or the Thomsons birdwatching group, please contact Kim Hore at thomsonscatchment@gmail.com
